

Ralph Menten, CEO

Software and services since 1989

Professional software for IBM Power Systems

menten GmbH develops and distributes a high quality application for electronic data interchange on IBM power systems.

As a solution for B2B communication and the automation of electronic business processes, it is used by renowned medium to large sized companies nationally and internationally to

manage data conversions, communication, signature and encryption.

With many years of experience in project-businesses menten GmbH accompanies its customers by design, installation and operation of complex EDI connections.

Number of Employees

menten's team consists of 20 employees, which includes specialists for Java, PHP, RPG and system technology.

Company type

- Independent Software Vendor (ISV)
- EDI Consultant
- Cloud Service Provider (CSP)

Year of Founding

1989 in Cologne, Germany

Locations

Germany

Bergisch Gladbach (Headquarter)

USA

Cape Coral, Florida

Certifications

IBM Advanced Business Partner
Lenovo Business Partner classic

Our Customers

Our customers are IBM i and IBM power system users of a wide range of industries. These include medium to large companies.

For example:

Abus • Bancolombia • Dachser • ING-DiBa • Gabor
• Privatbrauerei Erdinger Weißbräu • Rheinische
Energie • Sanetta • Wesco • Manitowoc • Trinks

Partnerships

menten's products are implemented worldwide. A network of international resellers takes over the distribution in Europe, Japan and the USA. As technology supplier, menten is partnering with suppliers of business applications for IBM i.

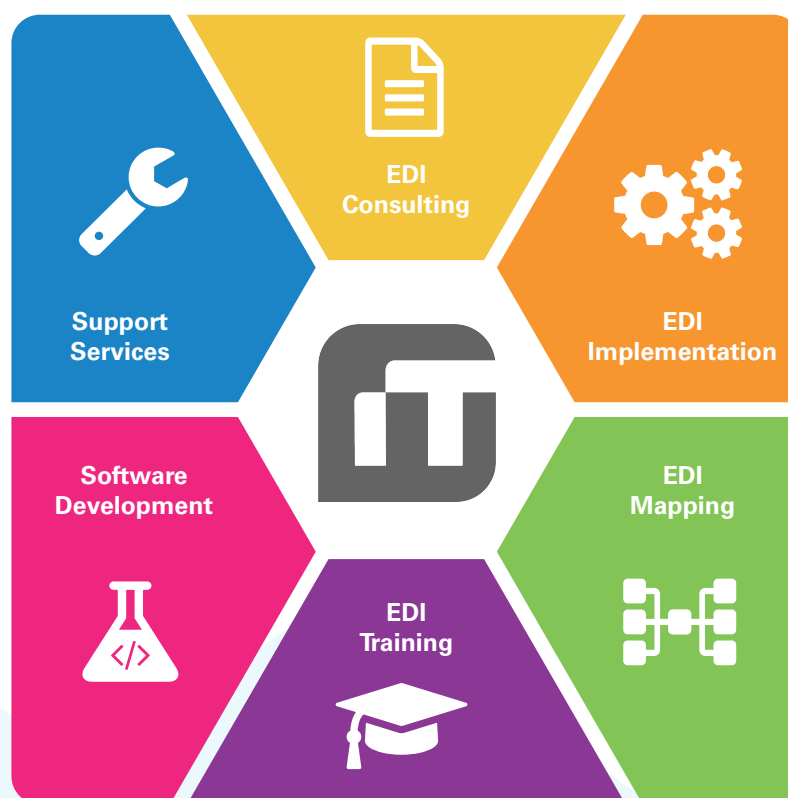

From strategic consideration to successful implementation

System & EDI Consulting

We support you when it comes to speeding up processes, reducing risks and improving core competences. For many years, our customers have been making use of the expertise of our EDI and IBM i specialists. It is the stated goal of the company to be

customer-specific, problem-oriented and spontaneous. With our products and services, our customers not only rely on our quality and performance, but also on the commitment of the entire company.

EDI Consulting

We advise you strategically and determine the prerequisites and requirements from existing documentations and partner guidelines in order to find the best solution for your company.

Software Development

We create customer-specific client/server applications for IBM Power Systems (Java, PHP and RPG).

EDI Implementation

We take over the complete setup and implementation of your electronic business processes for data exchange: Product installation, customer-specific configuration, partner connection, complete automation and control of the processes.

Support Service

We support you in the daily tasks of system administration and support your IT and communication infrastructure.

EDI Training

We train you and your employees in the daily use of i-effect functions and the application. The training e.g. for the graphical mapper is possible in your rooms as well as in our house with variable number of participants.

EDI Mapping

We create individual mapping assignments between international standards and / or databases or adapt them to the specifications agreed with your partners.

Product description

i-effect®, a data integration solution, supports all B2B communication tasks. Automation of electronic business communication on one central platform lowers administration and processing costs; it also frees up resources for more valuable tasks. Power Systems users can use i-effect® to run their existing business processes electronically and natively on IBM i (i5/OS, OS/400). i-effect® covers the core areas of data conversion and communication, but also covers the integration of spooled data, encryption and electronic signature.

Its modular architecture enables the expansion of required EDI functions at any time. Its transparent price structure built on consistent module prices allows for better planning from the start. Licensing is independent of processor groups. Transmission volume and number of communication partners are unlimited.

Software functions

- **Any2Any** EDI-Conversion
- **EDIFACT** - all UN/EDIFACT message types and subsets
- **XML** - all XML structures including industry standards like OPENTRANS or ebXML as long as an XSD file is available
- **CSV** - comma separated files according to RFC4180 can be processed if described using i-effect's directory format XML language
- **X.12** - all ANSI ASC X.12 message types and versions
- **FLATFILE** - record oriented or flatfile structures even with multi-level record grouping can be processed if described using the directory format XML language of i-effect®
- **DB** - connection to DB2, MySQL, MSSQL and Oracle databases
- **TRADACOMS** - all 25 UK message definitions

- Communication via AS2, FTP, HTTP, E-Mail and OFTP
- Spool conversion (Input: all data streams, Output: PDF, PDF/A, XLS, XLSX, XML, CSV, HTML, TIFF, GIF, RTF, TXT, SAV)
- Encryption with 2048bit, PGP, AES, Triple-DES
- Compression in ZIP, GZIP, ZIP64, Tar and 7z
- Automation of all processes
- Modular or as a complete solution
- Continuous support for DB2 and IFS
- Unicode and DBCS support
- With free graphical administration interface WebControl
- IASP enabled

TEST NOW - WITHOUT RISK

Test the full version of i-effect® for 30 days free of charge and without obligation.
